

ERP Implementation

Overview

Our ERP Implementation service enables organizations to streamline operations, standardize data, and achieve end-to-end visibility across departments. We design and deploy scalable ERP solutions such as SAP Business One to align financials, inventory, and operations, empowering leadership with accuracy, efficiency, and control.

Key Benefits

- **Operational Efficiency:** Automate core business processes and eliminate redundancies.
- **Financial Accuracy:** Strengthen reporting, forecasting, and compliance.
- **End-to-End Visibility:** Gain real-time insight into performance and resource utilization.
- **Scalable Growth:** Support multi-location and cross-functional operations.
- **Improved Collaboration:** Align departments on a single source of truth.

Our Approach

1. **Discovery and Requirements:** Assess business processes, system needs, and readiness. Define project scope, priorities, and measurable outcomes.
2. **Solution Design and Build:** Design and configure ERP modules for finance, inventory, operations, and reporting. Develop and deploy configurations to ensure scalability and compliance with business standards.
3. **Data Migration:** Cleanse, migrate, and validate business data within ERP. Ensure accuracy, completeness, and integrity of migrated information.
4. **Testing and User Enablement:** Execute UAT, refine workflows, and deliver training. Empower support and business teams with clear documentation and support.
5. **Go-Live and Continuous Optimization:** Transition to production with post-launch monitoring. Drive adoption and incremental improvement.

Core Deliverables

- ERP Implementation Plan (week 1–2): Scope, milestones, and resource alignment.
- Business Requirements Definition & Validation (week 2–4): Capture detailed functional and process requirements, confirm stakeholder sign-off, and establish baselines.
- Configure ERP Modules (week 4–8): Setup of finance, inventory, and operational processes.
- Data Migration Plan and Execution (week 5–9): Cleansing, mapping, transformation, and validation.
- User Training and Documentation (week 6–8): Onboarding and support materials.
- Post-Implementation Review (week 10): Performance audit and optimization roadmap.

Engagement Models

Model	Duration	Focus
Full Service	10 weeks	Includes all core deliverables.
ERP Quick Start	4-6 weeks	Rapid deployment for core standard business functions.
Managed ERP Enablement	Ongoing	Continuous refinement, training, and process optimization.
Enterprise Implementation	Multi-phase	Full ERP lifecycle design, configuration, and governance. Integrations can be added through the Systems Integration Architecture & Build service.

Outcomes

- Unified operations aligned to strategic goals.
- Improved accuracy in reporting and financial management.
- Streamlined workflows and reduced process duplication.
- A scalable, integration ready ERP foundation that supports sustainable growth.

Partner with Prendergast Digital Solutions

Unlock enterprise performance through an optimized ERP implementation.
